2
3 The present invention provides a method for removing selenium from an
4 aqueous stream by passing the aqueous stream, in combination with a
5 quaternary amine compound, through a filter and recovering a treated
6 aqueous stream which is depleted in selenium content relative to the
7 untreated aqueous stream. The present method removes selenium from an
8 aqueous refinery stream by passing the aqueous stream, in combination with
9 a quaternary amine compound, through a filter that can include clay, cellulose,
10 starch, activated carbon, and the like.
